

Equity Research Toolkit

Chart and framework library

Ready-made visuals for equity research pitch decks

Native PowerPoint charts · neutral layout · example data

How to use this library

19 slides with more than 45 editable charts, tables and frameworks – copy, paste, change the data, tell your story

Three steps

- 1

Copy
Select the chart (and any labels on top of it), Ctrl+C, then paste into your deck with 'Keep source formatting'.
- 2

Edit data
Right-click the chart → Edit Data. Type or paste your numbers from the Excel model (Deck_Feed, Output, Analysis).
- 3

Tell the story
Rewrite the panel title as a message ('Margins have expanded five years in a row'), not a label ('EBIT margin').

Colour rules

Navy = the company / history. Light blue = peers / forecast. Green and red only for up/down, bull/bear and above/below. Max three colours per chart.

Charts

#1	Column and bar charts
#2	Combination, line and area
#3	Pie and doughnut charts
#4	Bridge (waterfall) charts
#5	Valuation visuals
#6	Peer benchmarking
#7	Share price chart with events
#8	KPI tiles and scorecards
#9	Market-view charts

#1 column + CAGR, clustered, stacked, 100% stacked, ranked bar, +/- columns
#2 columns + margin line, scenario paths, vs. peers, stacked area, P/E band
#3 pie, doughnut with total, market share, twin doughnuts, KPI rings, 100% bar
#4 revenue bridge, EBIT bridge, EV-to-equity bridge, target price build-up
#5 football field, sensitivity heat map, scenario values, EV composition
#6 scatter with trend line, bubble chart, premium/discount bars, radar
#7 price vs. index, numbered events, target price, performance table
#8 headline tiles, Harvey-ball scorecard, estimates vs. consensus
#9 reverse DCF, growth by source, consensus gap, locations

Frameworks

#1	SWOT analysis
#2	Porter's five forces
#3	Competitive positioning matrix
#4	Business model and value chain
#5	Market sizing – TAM / SAM / SOM
#6	Investment thesis in three pillars
#7	Timeline and catalyst calendar
#8	Risk matrix with mitigants
#9	Scenario tree and expected value
#10	Value driver tree (ROIC)

Charts

Native, editable PowerPoint charts

Column and bar charts

The workhorses: levels over time, comparisons between companies and the composition of a total

Column with CAGR arrow

1

Use for: revenue, EBITDA, members – history vs. forecast

Clustered column

2

Use for: company vs. market / peers / consensus

Stacked column

3

Use for: revenue or EBIT by segment over time

100% stacked column

4

Use for: how the mix shifts over time

Ranked bar with median line

5

Use for: multiples, margins or growth across the peer group

Positive / negative columns

6

Use for: share price performance, estimate revisions, surprises

Combination, line and area charts

Two measures in one picture (level + ratio), developments over time and scenario paths

Columns + line on secondary axis

1

Use for: revenue and margin, volume and price

Single column + line

2

Use for: cash flow and cash conversion, capex and capex/sales

Multi-line – scenario paths

3

Use for: bear / base / bull, or company vs. peers over time

Line – company vs. peer average

4

Use for: margin, ROIC or leverage against the peer group

Stacked area

5

Use for: market size by segment or channel

Multiple over time with average ± 1 std. dev.

6

Use for: is the stock cheap vs. its own history?

Pie and doughnut charts

Composition at one point in time – keep to five slices or fewer and put the most important slice in navy

Pie with labels

1

Use for: shareholder structure, customer mix

Doughnut with total in the centre

2

Use for: revenue by segment or geography

Market share doughnut

3

Use for: highlight the company, grey out the rest

Twin doughnuts

4

Use for: revenue vs. profit mix – where is the money made?

KPI rings

5

Use for: one number that matters: recurring revenue, utilisation, payout

100% bar – the space-saving alternative

6

Use for: a mix in one line, e.g. cost base or funding

Bridge (waterfall) charts

Explain the move from A to B: what drives revenue, what lifts the margin and how enterprise value becomes equity value

Revenue bridge 2025A – 2030E (NOKm) 1

Use for: growth split into new locations, like-for-like and price/mix

EBIT bridge 2022A – 2025A (NOKm) 2

Use for: margin story: what came from growth and what from cost ratios

From enterprise value to equity value (NOKm) 3

Use for: the EV-to-equity bridge on the valuation slide

Target price build-up (NOK per share) 4

Use for: how DCF, peers and the 12-month roll-forward give the target price

All charts are native PowerPoint charts – right-click a chart and choose Edit Data to change the numbers. Example data: fictional Example Company ASA (from the DCF toolkit) and illustrative market data. Bridges are stacked columns with an invisible base series – edit the four series under Edit Data.

Valuation visuals

Football field, sensitivity heat map, scenario values and the composition of enterprise value

Football field (NOK per share)

1

Sensitivity heat map – WACC vs. terminal growth

2

Scenario values vs. share price

3

What is the value made of?

4

Peer benchmarking charts

Is the discount deserved? Put valuation next to the fundamentals that should explain it

Scatter with trend line – EV/EBIT vs. EBIT margin

1

Use for: is a high multiple explained by high margins or growth?

Bubble chart – growth vs. margin (size = market cap)

2

Use for: positioning of the company in its peer group

Premium / (discount) to peer median

3

Use for: one glance: where is the stock cheap or expensive?

Radar – company vs. peer median (peer median = 100)

4

Use for: a quality profile across several metrics

Share price chart with events

The classic opening chart of an equity story: what has moved the stock, and where do we think it is going?

Share price vs. index (rebased), NOK

1

Key events

- 1 Nov-24
Q3'24 report: margins beat consensus by 8%
- 2 Mar-25
Acquisition of Competitor D (Denmark) announced
- 3 Jul-25
Profit warning from a low-cost peer hits the sector
- 4 Nov-25
Capital markets day: 20% ROIC target
- 5 Apr-26
Price increases of 5% implemented in all markets
- 6 Jul-26
Q2'26 report: record subscriber intake

Performance

	1M	3M	6M	12M
EXMPL	-1%	-6%	-4%	-2%
OSEBX	+1%	-3%	-2%	+4%
Relative	-2%	-3%	-3%	-6%

Use for: share price history with numbered events and the target price

All charts are native PowerPoint charts – right-click a chart and choose Edit Data to change the numbers. Example data: fictional Example Company ASA (from the DCF toolkit) and illustrative market data. The price series is randomly generated – paste weekly prices from Bloomberg/Yahoo under Edit Data.

Headline KPI tiles

146

BUY · +20% upside

6.0%

volume + price/mix

18.6%

from 17.5% in 2025

21%

WACC 9.0%

11.3x

peers 12.7x

2

● strong ● good ● average ● weak ○ poor

3

Tiles: max five, one message each. Scorecards: be able to defend every ball. Estimate tables: highlight only the difference column – that is where your variant view shows.

Market-view charts

What the share price implies, where the growth comes from and where we differ from consensus – all read from the model

Reverse DCF – value vs. EBIT margin in 2033E (NOK)

1

Use for: the price-implied margin vs. yours – where the debate is

Revenue growth by source

2

Use for: capacity vs. like-for-like vs. price – what drives the top line

Our estimates vs. consensus

3

Use for: show where – and how much – you differ from the market

Locations and revenue per location (NOKm)

4

Use for: the roll-out and what each location earns

All charts are native PowerPoint charts – right-click a chart and choose Edit Data to change the numbers. Example data: fictional Example Company ASA (from the DCF toolkit) and illustrative market data. Reverse DCF, consensus and the location engine come from the Reverse_DCF, Consensus and Model sheets.

Frameworks

Strategy and valuation frameworks built from shapes

SWOT analysis

Strengths and opportunities outweigh the weaknesses – the main threat is pricing pressure from low-cost players

Internal	Strengths ▪ #1 market position in the Nordics with ~15% share ▪ Pricing power: price/mix +4-5% p.a. since 2022 ▪ Recurring revenue (~90%) and negative working capital ▪ ROIC of 19% – more than twice the cost of capital S	Weaknesses ▪ High fixed cost base: leases and personnel ~30% of sales ▪ Dependent on Norway (50% of revenue) ▪ Limited brand awareness in Finland W
	Opportunities ▪ Bolt-on M&A in a fragmented market ▪ Premium tiers and add-on sales lift revenue per customer ▪ Digital onboarding lowers customer acquisition cost ▪ Cash flow above target leverage funds buybacks on top of the dividend O	Threats ▪ Low-cost competitors expanding in the big cities ▪ Weaker consumer spending if rates stay high ▪ Wage inflation above price increases T

Porter's five forces

Attractive industry structure: fragmented buyers and suppliers, moderate rivalry – watch the low-cost entrants

Competitive positioning matrix

Example Company owns the premium, full-service corner – low-cost players compete for a different customer

Bubble size = market share (illustrative)

What the matrix tells us

- **Clear differentiation:** the only scaled player in the premium full-service corner
- **Low-cost overlap is limited** – different customer, different locations
- **Pricing headroom:** premium of ~25% to Competitor A is backed by service breadth
- **White space:** mid-priced concept in smaller cities

How to build it

- Pick two axes customers actually choose on
- Place peers first, then your company – be honest
- Use bubble size for a third dimension (share, revenue)
- Name the quadrants

Business model and value chain

Where the company makes its money: a subscription engine with add-on sales and scale benefits in every step

Revenue model (2025, % of revenue)

Unit economics per location (NOKm, 2025)

Market sizing – TAM, SAM and SOM

A bottom-up view of the opportunity: the serviceable market is NOK 37bn and the company holds 15% of it

Bottom-up build of the serviceable market (illustrative)

Country	Adult population (m)	Urban share	Penetration	Customers (m)	Revenue per customer (NOK)	Market (NOKbn)
Norway	4.4	83%	22%	0.80	17,000	13.7
Sweden	8.3	88%	21%	1.53	8,600	13.2
Denmark	4.7	88%	19%	0.79	7,400	5.8
Finland	4.5	86%	17%	0.66	6,100	4.0
Nordics				3.78		36.7

Frameworks are built from ordinary PowerPoint shapes and text boxes – click and type to edit. Content is illustrative for the fictional Example Company ASA.

Investment thesis in three pillars

BUY – target price NOK 146 (+20%): quality compounder, underestimated margins and a valuation gap

Catalysts next 12 months

Q3 report · Oct	Capital markets day · Nov	Q4 report · Feb	H1 2027
Price increases visible in revenue per customer	New margin and ROIC targets	Dividend proposal and buyback mandate	Closing of bolt-on acquisitions

Timeline and catalyst calendar

Where the company comes from – and the dated events that can close the valuation gap

Company history

Catalyst calendar – next four quarters

Frameworks are built from ordinary PowerPoint shapes and text boxes – click and type to edit. Content is illustrative for the fictional Example Company ASA.

Risk matrix with mitigating factors

Show that you know what can go wrong – and why it does not break the case

#	Risk	Prob.	Impact	Mitigating factors
1	Pricing pressure	High	High	Premium concept and locations differ from low-cost; bear case assumes –1pp price/mix p.a.
2	Consumer slowdown	Med.	High	Subscriptions are sticky; 2020 shows the downside (–8.5% revenue) and the recovery
3	Cost inflation	High	Med.	Annual price increases and 30% variable staffing; +0.5pp cost ratio in the bear case
4	Execution on growth	Med.	Med.	24-month ramp-up assumed; digital sales already 70% of new customers
5	Leverage and M&A	Low	Med.	NIBD/EBITDAaL 0.8x; bolt-ons only, funded from cash flow

Bottom line: with all major risks in play, our bear case DCF is NOK 62 (-49%) – against +20% to the target price.

Scenario tree and expected value

Three scenarios, explicit probabilities – the probability-weighted value is still above today's share price

Value driver tree (ROIC decomposition)

What has to be true for the returns to hold? Break ROIC into margin and capital turnover, then into operating drivers

How to read

2025A → 2028E for each driver
