SATS ASA

Operating leverage is showing up – the price does not yet

We keep BUY on SATS after a third quarter in which revenue per member rose 7% currency adjusted, EBITDA before IFRS 16 rose 22% to NOK 235m and the nine-month figure reached NOK 764m (+18%). Our 2026 estimates move up to the run-rate; the share price still implies an EBIT margin below today's. The target price and the scenario values are read from the model on the right.

Q3 2026: price did the work. Revenue grew 2% reported and 7% currency adjusted to NOK 1 324m with 0.5% fewer members and six fewer clubs; operating costs excluding depreciation were flat reported (+6% currency adjusted). EBITDA before IFRS 16 rose 22% to NOK 235m and EBIT before IFRS 16 rose 33% to NOK 182m; EPS NOK 0.69 against 0.48 (all [Q3-26]).

Against the company's own targets. The mid-term ambition is EBITDA before IFRS 16 of NOK 1.1bn. The last twelve months are at NOK 988m (871 + 764 − 647), 90% of the way there, and consensus has 2026 at 1 010 and 2027 at 1 137. The pipeline rose from 13 to 18 committed clubs through 2028 and the leverage range was widened to 1.0-2.0x with leverage at 1.1x.

What changed in our numbers. Norway price/mix for 2026 is raised to 7.5% (from 5.5%) and fixed-cost inflation for 2026 is cut to 1.0% (from 1.5%) to match the nine-month run-rate; nothing else in the forecast is touched. The estimate-revision table shows every line old against new.

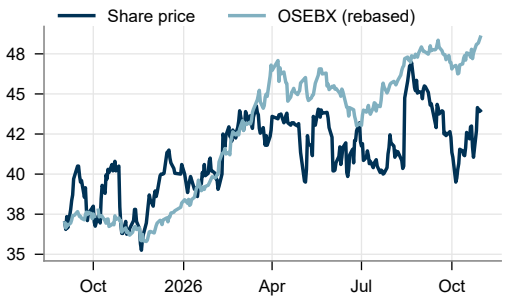

Valuation. Fair value is 70% DCF and 30% peer multiples, rolled forward twelve months. The reverse DCF on the valuation page shows the final-year EBIT margin the price implies against ours and against the 11.7% earned in 2025; the case gate requires the gap to be at least one point.

BUY

TP NOK 58 · +32%

Share price NOK 43.95 (30 Oct 2026). Expected total return 36% incl. dividend NOK 1.55. Cost of equity 9.8%.

1 Investment case overview

The thesis is unchanged: a largely fixed club cost base turns price increases and fuller clubs into margin, and the share price pays for little of it. Q3 2026 is the fourth quarter in a row in which price ran ahead of cost.

Share price, target price and the bear and bull values twelve months out

Source: Yahoo Finance (daily close) (prices); case model (target and scenario values). Data as of 2026-10-30.

Target price methodology

- Fair value today = 70% DCF (NOK 54.4) + 30% peer multiples (NOK 53.3) = NOK 54.1.
- Rolled forward twelve months at the cost of equity (9.8%) less the dividend (NOK 1.55), rounded: target NOK 58.
- Bull NOK 78 / bear NOK 38 are the same calculation on the bull and bear forecasts (probabilities 25% / 25%); probability-weighted value NOK 54.5.
- WACC 9.1%, terminal growth 2.0%, terminal value 66% of EV.

Downside risks to our case

- Low-cost chains (Nordic Wellness, Fitness24Seven, EVO) add capacity in the capitals and cap price increases – Sweden is the contested market.
- Norwegian wage growth of ~4% on a 37%-of-revenue personnel line reverses the operating leverage if ARPM growth falls below 2%.
- Denmark: the VAT change of 1 Jan 2026 cut the Danish member base by 4% y/y; a similar change elsewhere would repeat it.
- Roll-out execution: 8-12 openings a year from 2027 after years of a flat club count.

Our case – and how we differ from consensus

- **Operating leverage:** EBIT adj. margin rises from 11.7% (2025) to 15.1% by 2033 on a largely fixed cost base *(consensus: Close to us for 2026 and ~6% above us on 2027 EPS; the share price implies only ~12.3% in 2033 (11.7% today))* – EPS 2027E: our estimate is -1,4% vs. consensus
- **Roll-out:** 7-8 net openings a year in 2027-30 (the lower end of the 8-12 target), each reaching mature volume in its third year *(consensus: Roll-out stays at the committed 13 clubs and closures offset openings (net -3 clubs in 2026))* – Revenue 2027E: our estimate is +1,1% vs. consensus
- **Capital returns:** Buybacks lift NIBD/EBITDAaL towards the 1.5x lower end of the target range (we model 1.25x) on top of a 50-60% dividend payout – the share count falls ~4% a year *(consensus: The market values SATS on its ~3.5% dividend yield and treats buybacks as one-offs (our reading))* – EPS 2026E: our estimate is +4,6% vs. consensus

Upside risks to our case

- Members per club in Sweden back to the 2019 level earlier than modelled (a year of the base case in one step).
- A larger buyback than the policy implies while leverage sits at the bottom of the 1.0-2.0x range.
- Group training and premium tiers lift the mix beyond the 2.5-3% price growth in the model.

The investment case in four points

- **Recurring revenue:** 85% of revenue is monthly membership fees (NOK 1 131m of 1 324m in Q3 2026).
- **Pricing power:** ARPM +7% currency adjusted in Q3 2026 in every country; Norway +7% reported to NOK 607 per month.
- **Fixed cost base:** ~70% of personnel and ~60% of other opex are fixed per club (case model); opex ex D&A flat reported in Q3 on 2% fewer clubs.
- **Capital returns:** NOK 643m returned in nine months (372 buybacks + 271 dividends) against net profit of NOK 435m; leverage 1.1x.

Since the last edition – what we said, what the company reported, where it leaves the thesis

Topic	What we said	What was reported since	Verdict
Operating leverage	EBIT adj. margin rises from 11.7% (2025) to ~15% on a largely fixed cost base; 2026 EBITDA after leases 946 (first edition)	Q3 2026 EBITDA before IFRS 16 +22% to NOK 235m, nine months NOK 764m (+18%); LTM 988. Opex ex D&A flat reported on 2% fewer clubs	confirmed
Pricing power	Price/mix 5.5% in Norway and 2-3% elsewhere in 2026; the kill criterion is group price/mix below 1.5%	ARPM +7% currency adjusted in every country in Q3; reported +7% in Norway, −2% in SEK/EUR/DKK on the stronger krone	confirmed
Roll-out	7-8 net openings a year from 2027; 13 clubs committed through 2028	18 clubs committed through 2028; 3 openings and 6 closures in nine months of 2026 (268 clubs)	on track
Capital returns	Buybacks to 1.25x leverage on top of a 50-60% payout; share count −4% a year	NOK 372m buybacks and NOK 271m dividends in nine months (148% of net profit); leverage 1.1x; target range widened to 1.0-2.0x	confirmed
Denmark and Finland	Thin margins; Danish VAT cut the member base 4% (first-edition risk)	Danish members −4% y/y but country EBITDA +86% to NOK 16m on price; Finland +18% to NOK 15m	watch

2 Company overview

Company description

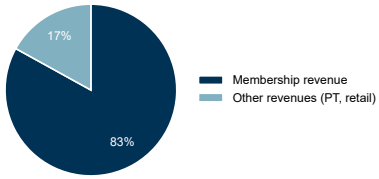

- SATS ASA is the largest fitness club operator in the Nordics: 268 clubs and 752 000 members at 30 Sep 2026 under the SATS, ELIXIA and Fresh Fitness brands, with online training in the SATS app.
- Revenue is membership fees (85%) plus personal training and retail; Norway is 47% of revenue, Sweden 33%, Finland 9%, Denmark 10% (Q3 2026).
- The model is a location engine: clubs × members per mature club × revenue per member, with a three-year ramp for new clubs.

SWOT

Strengths

- #1 in Norway, Sweden and Finland, #2 in Denmark (company)
- Highest revenue per member among listed fitness peers (Visible Alpha not used; peers' reports)
- Prepaid memberships: contract liabilities of NOK 632m fund working capital (30 Sep 2026)

Weaknesses

- Member base flat to down (−0.5% y/y) – growth is price, not volume
- Finland and Denmark earn 12% country margins against 30% in Norway

Opportunities

- Members per club in Sweden and Denmark below the Norwegian level
- 18 committed clubs and 8-12 a year from 2027
- Group training and premium tiers lift ARPM and cut churn (company)

Threats

- Low-cost capacity in the capitals
- Wage and rent inflation on a fixed base
- Regulation: VAT on services (Denmark 2026)

3 Quarter preview

Q4 2026 preview – reported 9 Feb 2027

The Q4 2026 report is due on 9 February 2027. Consensus for the quarter is public on the company's website (Modular Finance, seven contributors); our quarter is the annual model split by the seasonality of 2024-2025, not a separate quarterly forecast.

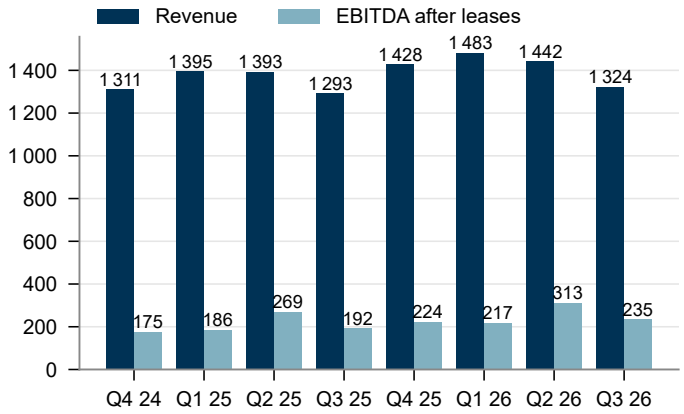

Q4 2026 – our estimate against last year and consensus

NOKm	Q4 2025	Q4 2026 ours EST	y/y	Consensus	vs cons.	FY 2026 EST
Revenue	1 428	1 481	+4%	1 420	+4%	5 714
EBITDA reported	534	570	+7%	546	+4%	2 252
EBITDA after leases	224	257	+15%	246	+5%	1 001
EBIT adj.	168	199	+18%	*not available*	–	772
Net profit	121	144	+19%	141	+2%	564
EPS (NOK)	0.61	–	–	*not available*	–	3.11

Note: Our quarter EST = the full-year forecast for 2026E × the average share of Q4 in the full year over 2025 (a seasonality split of the annual model, not a separate quarterly forecast).

4 Deep dives – the themes that decide the case

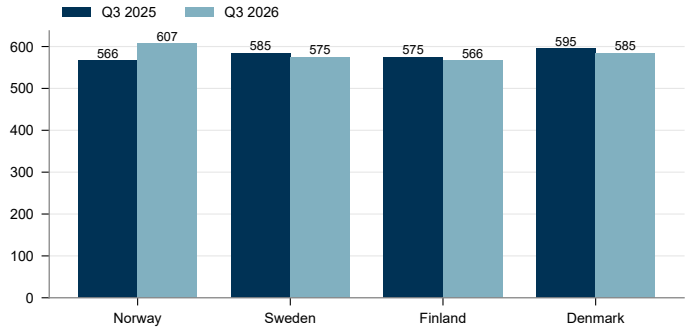

1. Price against cost: every country lifted revenue per member faster than costs in Q3 2026

Operating leverage is the thesis. Did the quarter show price running ahead of cost in each country, or only in Norway?

Revenue per member rose 7% currency adjusted in all four countries in Q3 2026 (Norway +7% reported; Sweden, Finland and Denmark +6% currency adjusted and −2% reported on the stronger krone). Country EBITDA before IFRS 16 rose 9% in Norway, 17% in Sweden (+26% currency adjusted), 18% in Finland and 86% in Denmark; group EBITDA before IFRS 16 rose from NOK 192m to 235m.

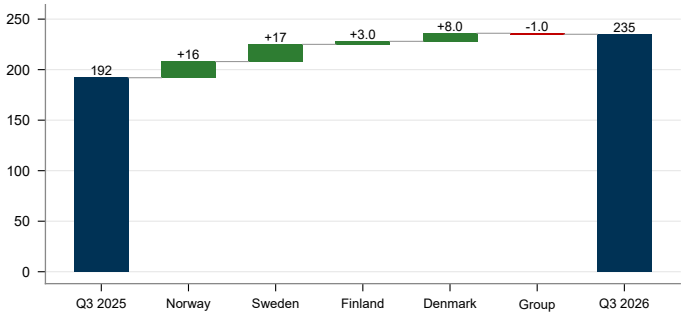

The bridge by country shows where the NOK 43m came from: Norway and Sweden NOK 16-17m each, Denmark NOK 8m after the VAT-driven price increase, Finland NOK 3m. Sweden's margin reached 24% (20%), still two thirds of Norway's 30%.

Revenue per member by country, Q3 2025 vs Q3 2026 (NOK per month, reported)

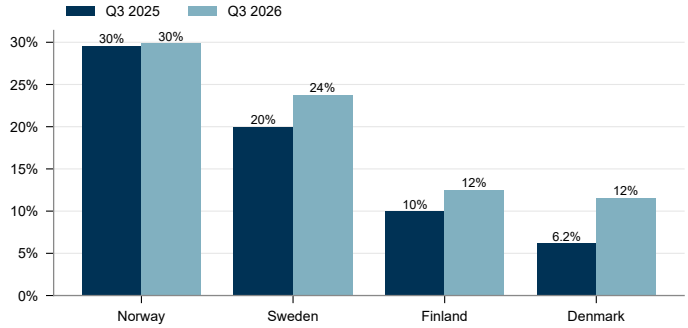

Note: Reported in NOK; currency adjusted +7% in Norway, +6% in Sweden, Finland and Denmark (company).

Into the model

Driver	Value used	Where in the model
Price/mix growth, Norway 2026E	7.5% (first edition 5.5%) – ARPM +7% Q3, +6% YTD	Drivers | priceA
Fixed-cost inflation 2026E	1.0% (first edition 1.5%) – opex ex D&A +1.4% reported for 9M	Drivers | cpi
Price/mix growth, Sweden and Finland/Denmark 2026E	unchanged 2.0% / −1.0% (reported ARPM −2% in SEK/EUR/DKK translation)	Drivers | priceB, priceC

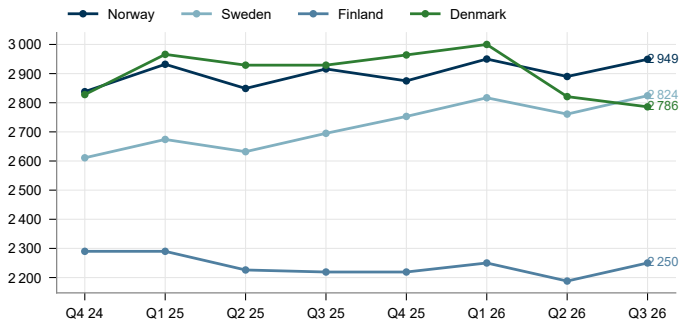

2. Utilisation: the member base is flat, so the next step of margin must come from fuller clubs

Members fell 0.5% y/y in Q3 2026 while clubs fell 2%. Are the remaining clubs filling up, and where is the headroom?

Members per club rose in every country except Denmark: Norway 2 949 (2 916 a year earlier), Sweden 2 824 (2 695), Finland 2 250 (2 219), Denmark 2 786 (2 929 after the VAT change). The company reports 1.9% more members per square metre and 2% more workouts.

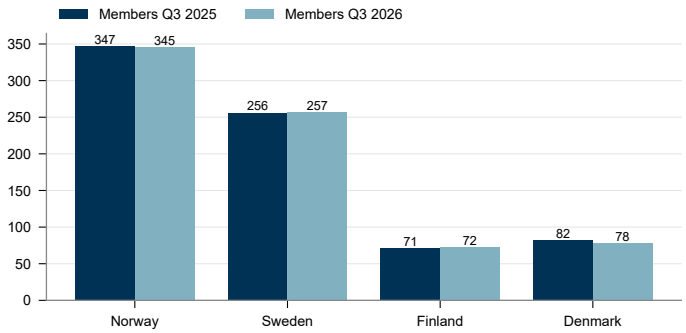

The base case keeps like-for-like volume growth at 1.0% in Norway and 1.5% in Sweden for 2026 and lets it fade; the 2026 figures below are the run-rate test of that assumption. The Danish member loss (−4%) is the one segment where the model's 0% for 2026 looks generous.

Members per club by country (members ÷ clubs at quarter end)

Source: SATS ASA interim reports Q4 2025-Q3 2026, country pages (members and clubs); own division. Data as of 27 Oct 2026.

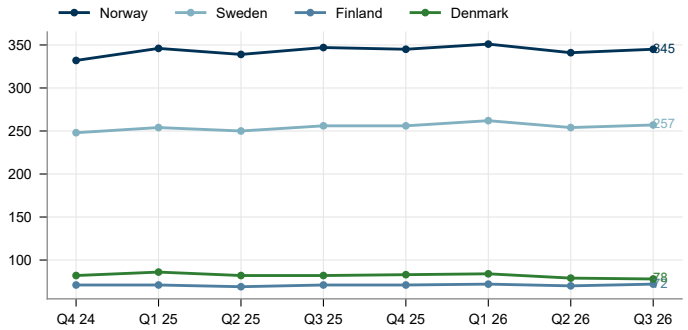

Members ('000) and clubs by country, Q3 2026 vs Q3 2025

Note: Clubs: Norway 117 (119), Sweden 91 (95), Finland 32 (32), Denmark 28 (28).

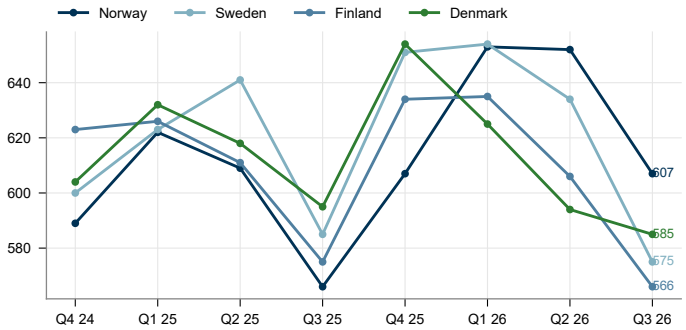

Source: SATS ASA Q3 2026 interim report, 27 Oct 2026, country pages. Data as of 27 Oct 2026.

Members by country ('000, quarter end)

Source: SATS ASA interim reports Q4 2025-Q3 2026, country pages. Data as of 27 Oct 2026.

Revenue per member by country (NOK per month, reported)

Note: Q3 is the seasonally weakest quarter for ARPM (summer freezes); reported NOK, so the 2026 figures for Sweden, Finland and Denmark carry the stronger krone.

Source: SATS ASA interim reports Q4 2025-Q3 2026, country pages. Data as of 27 Oct 2026.

Into the model

Driver	Value used	Where in the model
Like-for-like volume growth 2026E	Norway 1.0%, Sweden 1.5%, Finland & Denmark 0.0% – unchanged; members per club +1% to +5% y/y except Denmark	Drivers | lflA/B/C
Net new clubs 2026E	−1 per segment (3 openings, 6 closures to Q3) – unchanged	Drivers | netA/B/C

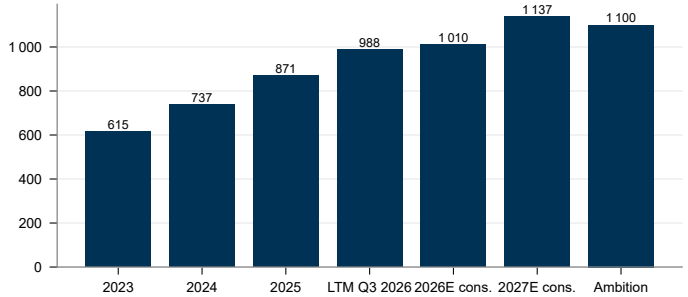

3. Targets against delivery: 90% of the way to the NOK 1.1bn ambition

The CMD 2025 set an EBITDA-before-IFRS-16 ambition of NOK 1.1bn, 8-12 openings a year, leverage of 1.5-2.0x (now 1.0-2.0x) and a payout above 50%. Where is each one after Q3 2026?

EBITDA before IFRS 16 has gone from NOK 615m (2023) to 737m (2024), 871m (2025) and 988m in the twelve months to September 2026 – NOK 112m short of the ambition. Consensus has 2026 at 1 010 and 2027 at 1 137; our model has 1 001 and 1 093, i.e. we reach the ambition a year later than the market does.

Openings are the one target behind plan: three openings and six closures in nine months of 2026 against a plan of 8-12 openings a year from 2027. The pipeline has moved (18 committed clubs, from 13), which is what the roll-out variant perception on page 2 watches.

EBITDA before IFRS 16: delivered against the mid-term ambition (NOKm)

Note: LTM = FY2025 871 + 9M 2026 764 − 9M 2025 647. The ambition has no date; the company says progress 'is expected to unfold gradually'.

Source: SATS ASA annual and interim reports (2023-2025, LTM); consensus published by SATS (Modular Finance, 28 Oct 2026); CMD 2025 ambition. Data as of 28 Oct 2026.

Company targets against the latest actuals

Target (source)	Level	Latest actual	Status
EBITDA before IFRS 16 (CMD 2025, Q3 2026 report)	NOK 1.1bn mid-term	NOK 988m LTM Q3 2026 (90%)	on track
Club openings (CMD 2025)	8-12 a year from 2027	3 openings, 6 closures 9M 2026; 18 committed through 2028	behind, pipeline growing
Leverage (Q3 2026 report)	1.0-2.0x net debt / EBITDA before IFRS 16	1.1x	at the bottom of the range
Distribution (Q3 2026 report)	≥ 50% of net profit; DPS rising	NOK 643m vs net profit 435m (148%) in 9M 2026	above
Maintenance capex (CMD 2025)	~5% of revenue	NOK 131m on 4 249m (3.1%) in 9M 2026	below – a Q4 catch-up is usual

Source: SATS CMD 2025; SATS ASA Q3 2026 interim report, 27 Oct 2026. Data as of 27 Oct 2026.

Into the model

Driver	Value used	Where in the model
Mid-term ambition in the model	EBITDA after leases 1 001 (2026E), 1 093 (2027E), 1 178 (2028E) – the ambition is reached in 2027-28	Model | ebitdaal
Openings 2027E-2028E	+7 / +8 net – the lower end of 8-12 less closures	Drivers | netA/B/C

4. Capital returns and the pipeline: NOK 643m returned in nine months, 18 clubs committed

Can the company return more than half of net profit and still fund 8-12 openings a year?

Nine months to September 2026: free cash flow NOK 369m before the seasonally strong fourth quarter, buybacks NOK 372m (8.7m shares), dividends NOK 271m, net debt NOK 1 056m and leverage 1.1x. A new club costs NOK 7-8m (CMD 2025) – ten a year is NOK 70-80m, a fifth of free cash flow.

The model's buybacks of ~NOK 416m in 2026 and ~NOK 350m a year after that keep leverage at 1.25x; the widened range (1.0-2.0x) makes that the conservative end. The share count falls about 4% a year in the base case.

Cash generation and distribution, nine months 2026 (NOKm)

Item	9M 2026	9M 2025	Source
Net cash flow from operations	1 428	1 425	cash flow statement

Diluted shares	192.1m + 1.1m matching shares	Inputs | shares, dilutive

5 Competition per market

Norway

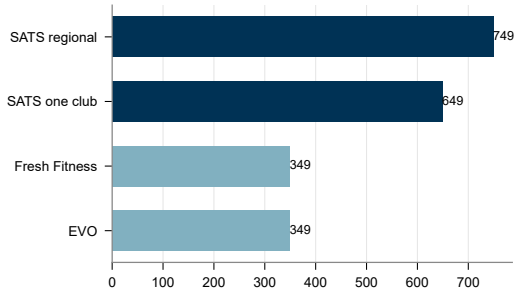

SATS is the premium price leader; Fresh Fitness is its own low-cost flank. EVO (unstaffed, 24/7) is the low-cost challenger in the cities.

Norway – operators, units, prices and binding

Operator	Segment	Units	Price (monthly)	Binding	Source	Observed
SATS	Premium, group training	117 clubs (Q3 2026)	NOK 450-1 000 by tier and club	12 months or none	SATS ASA Q3 2026 interim report, 27 Oct 2026; sats.no	27 Oct 2026
Fresh Fitness (SATS)	Low-cost	42 clubs (Q2 2026)	NOK 299-399	None	SATS Q2 2026 presentation; freshfitness.no	Aug 2026
EVO Fitness	Low-cost, 24/7, unstaffed	~75 (EST)	NOK 249-399	None	evofitness.no; klikk.no price comparison	Aug 2025
Actic	Mid-market	Norway sold 2025	n.a.	n.a.	Affärsvärlden	2025

Source: Operators' websites; see the Source column. Data as of see the Observed column.

Norway – comparable monthly price

Note: List prices are indicative and not like-for-like: tiers, binding periods and start fees differ. Not re-collected for this edition (EST where marked).

Source: klikk.no price comparison (Aug 2025) and the operators' websites; list prices for a comparable monthly membership. Data as of n.a..

What it means for the case

The premium is about 2x the low-cost price; Norway's ARPM still rose 7% in Q3 2026, so the premium holds. The kill criterion is group price/mix growth below 1.5%.

Sweden

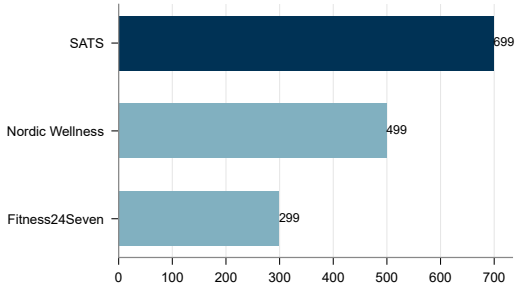

The contested market: Nordic Wellness and Fitness24Seven add capacity every year and Sweden's country margin (24%) is two thirds of Norway's.

Sweden – operators, units, prices and binding

Operator	Segment	Units	Price (monthly)	Binding	Source	Observed
SATS	Premium, group training	91 clubs	SEK 499-799	12 months or none	SATS ASA Q3 2026 interim report, 27 Oct 2026; sats.se	27 Oct 2026
Nordic Wellness	Mid / low-cost	450+ clubs; targets 600 by 2030	SEK 299-699	12 months	nordicwellness.se; Börskollen	Aug 2025
Fitness24Seven	Low-cost, 24/7	280+ clubs (5 countries)	SEK 199-399	None	fitness24seven.com; job postings	Jul 2026
Actic	Mid-market	~100 clubs, shrinking	n.a.	n.a.	Affärsvärlden	2025

Source: Operators' websites; see the Source column. Data as of see the Observed column.

Sweden – comparable monthly price

Note: Indicative list prices, SEK per month; not like-for-like.

Source: Börskollen (Aug 2025), subger.com (Mar-Jul 2026), operators' websites. Data as of n.a..

What it means for the case

We model 2-3% price growth in Sweden against 3-3.5% in Norway and let utilisation (members per club +5% y/y in Q3 2026) do the work.

Finland and Denmark

Small segments (9% and 10% of revenue) with thin margins; Denmark's VAT change of 2026 is the regulatory precedent.

Finland and Denmark – operators, units, prices and binding

Operator	Segment	Units	Price (monthly)	Binding	Source	Observed
ELIXIA (SATS)	Premium	32 clubs, Finland	EUR 60-100	12 months or none	SATS ASA Q3 2026 interim report, 27 Oct 2026; elixia.fi	27 Oct 2026
SATS Denmark	Premium	28 clubs, Greater Copenhagen	DKK 450-650	12 months or none	SATS ASA Q3 2026 interim report, 27 Oct 2026; sats.dk	27 Oct 2026
PureGym / Fitness World	Low-cost	#1 in Denmark (c.40 clubs in Copenhagen)	n.a.	n.a.	puregym.dk	2025
Fitness24Seven, Fressi	Low-cost / mid	largest chains in Finland	n.a.	n.a.	operators' websites	2025

Source: Operators' websites; see the Source column. Data as of see the Observed column.

What it means for the case

Both countries earn 12% country margins; the model keeps price/mix at −1% in 2026 (Danish VAT) and 2.5% after.

6 Macro – the drivers that reach the P&L

Macro drivers and where they enter the model

Indicator	Norway	Sweden	Source	Date
Policy rate	4.50% (Oct 2026)	1.75% (Sep 2026)	Norges Bank; Riksbank	Oct 2026
CPI 2026E / 2027E	3.3% / 2.6%	1.5% / 2.1% (KPIF)	Norges Bank MPR 3/26; Riksbank MPR Sep 2026	Sep 2026
Wage growth 2026E / 2027E	4.4% / 4.0%	3.5% / 3.4%	Norges Bank MPR 3/26; Konjunkturinstitutet	Sep 2026
10-year government bond	4.71% (7 Oct 2026)	–	Oslo Børs	7 Oct 2026
SATS ARPM growth, Q3 2026 (currency adjusted)	+7%	+6%	SATS ASA Q3 2026 interim report, 27 Oct 2026	27 Oct 2026
SATS country EBITDA margin, Q3 2026	30%	24%	SATS ASA Q3 2026 interim report, 27 Oct 2026	27 Oct 2026

Source: See the Source column. Data as of see the Date column.

How the macro reaches the P&L

- **Wages → personnel costs (37% of revenue):** Norwegian wage growth of 4.4%/4.0% on ~60% of the fixed base is why fixed-cost inflation is 3.25% in 2027 and 3.0% after.
- **CPI → rent:** leases are CPI-indexed; Norwegian CPI 2.6% in 2027 is the rent line. Nine-month lease payments fell 2% on the stronger krone and fewer clubs.
- **Policy rate and bond yield → discount rate:** risk-free 4.71% keeps the WACC at 9.1%; a 1pp lower WACC is worth about NOK 5 per share (sensitivity table).
- **FX:** a stronger NOK cuts reported Swedish, Finnish and Danish revenue and costs alike (−5pp on Q3 revenue growth); the model is in reported NOK.

Why the estimates changed

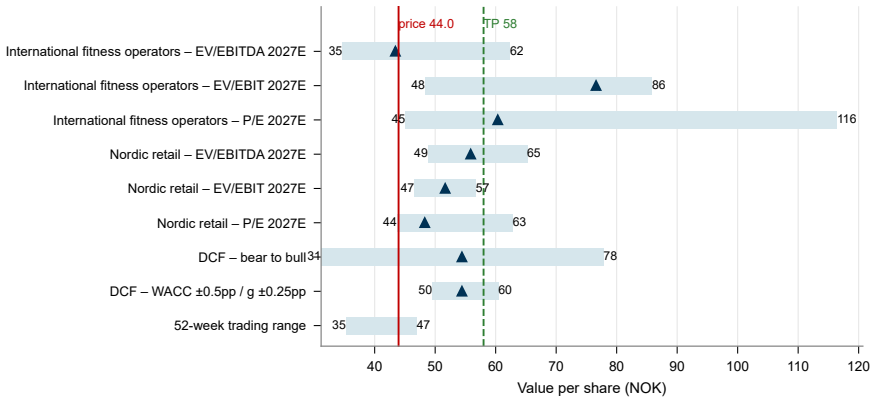

- Norway price/mix 2026E raised to 7.5% from 5.5%: ARPM +7% in Q3 and +6% for nine months, nine-month Norwegian revenue +8%.
- Fixed-cost inflation 2026E cut to 1.0% from 1.5%: opex ex D&A +1.4% reported for nine months on six fewer clubs and a stronger krone; lease payments −2%.
- Market data: price NOK 43.95 (30 Oct 2026 close), balance sheet 30 Sep 2026, 192.1m shares; consensus from the company's published table (28 Oct 2026).
- No change to 2027-2033 drivers, scenarios, WACC or terminal assumptions.

8 Valuation

From value to target

DCF value per share	NOK 54.4
Peer multiples value per share (median)	NOK 53.3
Blended fair value today (70% / 30%)	NOK 54.1
Rolled forward 12m at Ke less dividend	× (1 + 9.8%) − NOK 1.55
12-month target price	**NOK 58**
Upside / expected total return	32% / 36%
Rating	BUY

Valuation summary – value per share by method (range and median; lines = price and target)

Source: Case model (DCF, sensitivity, scenarios); peer multiples from the data module (Yahoo Finance). Data as of 30 Oct 2026.

What the share price of NOK 43.95 implies – each driver solved alone, the others at our base case

Driver	Market-implied	Our base case	Gap	Latest actual
Final-year EBIT adj. margin	13.3%	15.9%	+2.6pp	11.7%
Revenue CAGR to the final year	4.6%	5.2%	+0.6pp	10.5%
WACC	10.5%	9.1%	+1.5pp	–
Terminal growth	(1.7%)	2.0%	-3.7pp	–

Note: Case gate passed: the view differs from the market by 2.6pp on the final-year margin and 0.6pp on growth; the DCF is +24% from the price (rules: ≥ 1pp and ≥ 10 %).

Source: Case model (Reverse_DCF sheet). Data as of 30 Oct 2026.

Reading the reverse DCF

- The implied final-year margin sits between the 11.7% earned in 2025 and our 15.1%: the price pays for part of the operating leverage, not for the roll-out.
- Solved on growth instead, the price implies a revenue CAGR half a point below ours with the same cost base.
- The gate asks for a 1pp gap on at least one driver and 10% between DCF and price; both are met (valuation page).

DCF – free cash flow after lease payments (pre-IFRS 16)

10 What we do not know

Data map – what this report could not use

Input	Status	Source we lack / what we did instead
Largest shareholders	Not collected	satsgroup.com loads the table dynamically; the 2025 annual report's top-20 list was not retrieved for this edition
Quarterly history by segment, Q4 2024-Q3 2026	Collected	interim reports (key figures, note 2, country pages)
Consensus by line (revenue, EBITDA, EBITDA before IFRS 16, net profit, members; Q4 2026E, 2026E, 2027E)	Have	published by SATS (Modular Finance, 7 contributors, 28 Oct 2026)
Consensus EBIT, EPS, DPS by year	Partly	EPS from Yahoo Finance (5 analysts); EBIT and DPS not published
Price study (list prices over time, competitor screen)	Not re-collected	the first-edition observations (Aug 2025-Jul 2026) are reused with their dates
Forward P/E history on consensus	Missing	Bloomberg/FactSet; replaced by trailing multiples on year-end prices
Consensus EBIT, DPS	Missing	Modular Finance consensus via satsgroup.com (revenue, EBITDA; 7 contributors) and Yahoo Finance (EPS; 5 analysts) has revenue and EPS only; Bloomberg/FactSet not used
Web traffic for the company and its competitors	Missing	Similarweb (paid) – no free equivalent
Peer operating estimates (units, members, revenue per unit)	Missing	Visible Alpha (paid); peers' own reports give history only

The assumptions that carry most – one change at a time from the base case (DCF NOK 54.4, TP NOK 58 BUY)

Change	DCF value	vs base	Target	Rating
Like-for-like volume -1pp a year	NOK 35.0	NOK -19.4	NOK 41	SELL
Price/mix -1pp a year	NOK 35.4	NOK -19.0	NOK 41	SELL
Price -0.5pp and cost inflation +0.5pp	NOK 38.2	NOK -16.2	NOK 44	SELL
All costs variable (no operating leverage)	NOK 42.8	NOK -11.6	NOK 47	HOLD
WACC 8.0%	NOK 65.3	NOK 10.8	NOK 66	BUY
Price/mix +0.5pp a year	NOK 64.4	NOK 9.9	NOK 66	BUY
Price/mix -0.5pp a year	NOK 44.8	NOK -9.6	NOK 50	BUY
No new clubs (net openings = 0)	NOK 46.2	NOK -8.2	NOK 52	BUY
Personnel ratio stays at the last actual level (all personnel costs variable)	NOK 46.7	NOK -7.7	NOK 51	BUY
WACC 10.0%	NOK 47.2	NOK -7.2	NOK 52	BUY
Cost inflation 4.0% also in 2026 (no FX relief)	NOK 47.6	NOK -6.9	NOK 50	BUY
Cost inflation +0.5pp from 2027	NOK 47.9	NOK -6.5	NOK 52	BUY
Cost inflation -0.5pp from 2027	NOK 60.8	NOK 6.4	NOK 63	BUY
RONIC = WACC (growth creates no value in the TV)	NOK 48.4	NOK -6.0	NOK 53	BUY
Terminal growth 3.0%	NOK 59.4	NOK 5.0	NOK 62	BUY
One more opening per country a year	NOK 58.9	NOK 4.4	NOK 62	BUY
Half the openings	NOK 50.3	NOK -4.1	NOK 55	BUY
EBIT margin -1pp in every year	NOK 50.4	NOK -4.0	NOK 54	BUY
Terminal growth 1.0%	NOK 50.7	NOK -3.8	NOK 55	BUY
RONIC 15%	NOK 52.1	NOK -2.3	NOK 56	BUY
Maintenance capex 6% of revenue	NOK 52.5	NOK -1.9	NOK 56	BUY
Committed pipeline only in 2027-28 (5 + 5 clubs), base case after	NOK 53.1	NOK -1.3	NOK 57	BUY
Capex per new club NOK 15m	NOK 53.5	NOK -0.9	NOK 57	BUY
Gross margin stays at the last actual level	NOK 54.4	NOK -0.0	NOK 58	BUY
Buybacks off	NOK 54.4	NOK 0.0	NOK 58	BUY
Leverage target 1.0x (less buybacks)	NOK 54.4	NOK 0.0	NOK 58	BUY
100% DCF (no peer weight)	NOK 54.4	NOK 0.0	NOK 58	BUY

Source: Case model, whatif_runs.py (whatif_runs_sats.json). Data as of 30 Oct 2026.

The judgements on the record – audit items that are not a plain pass, and the answer given

#	Failure mode	What the audit saw	The case's answer
A10	Anchoring to management guidance	no company guidance in META['guidance']	–
B29	Heuristic target / conflicts	DCF weight 70%; conflicts block: not in META	–
A12	Stale target after bad news	model 3 days old; current price not given (--price-now)	–
B19	Growth not paid for	workbook check: Growth is paid for: return on new capital (explicit period) vs. today's ROIC | 3.1949830002762014 | WARNING	–
A2	Forecast range too narrow	bear 31.1 / base 54.4 / bull 77.9 per share; revenue CAGR spread bull-bear 3.5%; bear should be ≥25% below base and the growth spread wide (consensus SD 8.3% vs realised 18.7%)	Bear is 45% below base; the revenue spread is narrow because the bear is a cost/price story at the committed club pipeline, not a volume collapse (SCENARIO_ADJ comment).
A3	Hockey-stick margins	final-year EBIT adj. margin 15.9% vs historical max 11.7% (+2pp limit)	Margin above history because fixed club costs are spread over price increases and a maturing Swedish estate; personnel ratio sensitivity shown on the assumptions slide (case text).
A4	No mean reversion	margin today 11.7% above the peer median 8.6% and still rising to 15.9%	Peer median is mixed retail and fitness on different lease bases; the case's own reverse DCF shows the market prices 12.3% against our 15.1% (case text).
A5	Terminal returns not faded	terminal RONIC 25.0% / WACC 9.1% = 2.76x (>2.0x)	RONIC 25%: a new club costs NOK 7-8m and pays back in about three years (CMD 2025); terminal RONIC = WACC gives NOK 45 per share and is shown as a what-if (TERMINAL comment).
B21	rf / ERP / currency	rf 4.71%, ERP 5.0%, size 1.0%, specific 0.0%; equity NOK 8.4bn; size premium 1.0% vs PwC/FFN median 0% for NOK 8.4bn equity	1.0% size/liquidity premium for a NOK ~7.6bn market cap with ~NOK 20m daily turnover: above the PwC/FFN median (0%) and about its average for market caps above NOK 5bn (WACC_INPUTS comment).

What would change the conclusion

- Price/mix 1pp a year lower than the base case takes the DCF to NOK 35 and the rating to SELL (target 41); 0.5pp lower gives NOK 45 and a BUY at a target of 50 (what-if runs).
- Margins reverting to the last three years' mean (stress #4) gives NOK 31 – a SELL at a target of 33.
- RONIC equal to the WACC in the terminal value gives NOK 48 (removes NOK 6 per share); a WACC one point higher gives NOK 47 – the rating survives both.
- The personnel ratio staying at the 2025 level (no operating leverage on wages) gives NOK 47.
- The bear case – price growth capped near 2% by low-cost competition while wages grow 4% – is NOK 31 today and NOK 38 in twelve months (SELL).

One-at-a-time changes that flip the rating: Like-for-like volume -1pp a year; Price/mix -1pp a year; Price -0.5pp and cost inflation +0.5pp; All costs variable (no operating leverage).

Stress tests (ANALYSE.md) – value and rating under each

Stress	DCF value	Target	Rating
Scenario = Bear	NOK 31.1	NOK 38	SELL
Scenario = Bull	NOK 77.9	NOK 78	BUY
WACC override 10%	NOK 47.2	NOK 52	BUY
Share price +25%	NOK 54.4	NOK 58	HOLD
#4 margins revert to the last-3-year mean*	NOK 30.9	NOK 33	SELL
#17 NWC/sales held at the last actual	NOK 54.5	NOK 58	BUY
#21 WACC +1pp	NOK 46.8	NOK 52	BUY
#5 RONIC = WACC in the terminal value	NOK 48.4	NOK 53	BUY

Source: Case model, stress_test.py. Data as of 30 Oct 2026.

What we do not know

- Churn by membership tier and the share of members with group training – the company gives growth rates, not levels.
- Rent indexation terms and lease maturities per country beyond the aggregate lease liability.
- The October 2026 buyback volume and the next programme's size (first visible in the Q4 report).
- How much of the 7% currency-adjusted ARPM growth is list price and how much is mix (tiers, add-ons) – the price tracker was not updated for this edition.
- Peer unit economics on a consistent basis (members, revenue per member, cost per club) – available to the sell side through Visible Alpha.

Definitions

Term	Meaning
EBITDA after leases (EBITDAaL)	EBITDA less the lease payments of the period – the pre-IFRS 16 operating cash margin the valuation is built on.
EBIT adj.	EBITDA after leases less depreciation of owned assets; excludes special items. The margin the reverse DCF solves for.
FCFF	NOPAT + D&A − capex − change in working capital, after lease payments; discounted at the WACC.
ROIC	NOPAT over invested capital excluding right-of-use assets.
NIBD / EV	Net interest-bearing debt excluding lease liabilities; enterprise value = market capitalisation + NIBD + other claims (pre-IFRS 16).
Target price	Blended fair value today (DCF and peer multiples), rolled forward twelve months at the cost of equity less the expected dividend, rounded.
Rating	BUY: 12-month expected total return above the cost of equity + 5pp; SELL: below Ke − 5pp; HOLD in between
Reverse DCF	The value of one driver (final-year margin, revenue CAGR, WACC or terminal growth) at which our model returns today's share price, the others held at our base case.
Case gate	The report is only built if a driver differs from the market-implied value by at least 1pp and the DCF is at least 10 % from the price.
Kill criterion	A KPI level at which the thesis is wrong; checked against the latest actual (status on track / watch / breached) and against the base case.
EST	A case-team estimate (forecast, split or assumption), as opposed to a reported figure.
Not available	A figure the sell side buys (Bloomberg, FactSet, Visible Alpha, Similarweb) and this toolkit does not have; never replaced by a guess.

Case audit – the 30 failure modes of ANALYSE.md section 4

#	Failure mode	Status	Detail
A10	Anchoring to management guidance	MISSING	no company guidance in META['guidance']
B29	Heuristic target / conflicts	MISSING	DCF weight 70%; conflicts block: not in META
A12	Stale target after bad news	WARN	model 3 days old; current price not given (--price-now)
B19	Growth not paid for	WARN	workbook check: Growth is paid for: return on new capital (explicit period) vs. today's ROIC | 3.1949830002762014 | WARNING
A2	Forecast range too narrow	JUSTIFIED	bear 31.1 / base 54.4 / bull 77.9 per share; revenue CAGR spread bull-bear 3.5%; bear should be ≥25% below base and the growth spread wide (consensus SD 8.3% vs realised 18.7%) *Reason: Bear is 45% below base; the revenue spread is narrow because the bear is a cost/price story at the committed club pipeline, not a volume collapse (SCENARIO_ADJ comment).*
A3	Hockey-stick margins	JUSTIFIED	final-year EBIT adj. margin 15.9% vs historical max 11.7% (+2pp limit) *Reason: Margin above history because fixed club costs are spread over price increases and a maturing Swedish estate; personnel ratio sensitivity shown on the assumptions slide (case text).*
A4	No mean reversion	JUSTIFIED	margin today 11.7% above the peer median 8.6% and still rising to 15.9% *Reason: Peer median is mixed retail and fitness on different lease bases; the case's own reverse DCF shows the market prices 12.3% against our 15.1% (case text).*
A5	Terminal returns not faded	JUSTIFIED	terminal RONIC 25.0% / WACC 9.1% = 2.76x (>2.0x) *Reason: RONIC 25%: a new club costs NOK 7-8m and pays back in about three years (CMD 2025); terminal RONIC = WACC gives NOK 45 per share and is shown as a what-if (TERMINAL comment).*
B21	rf / ERP / currency	JUSTIFIED	rf 4.71%, ERP 5.0%, size 1.0%, specific 0.0%; equity NOK 8.4bn; size premium 1.0% vs PwC/FFN median 0% for NOK 8.4bn equity *Reason: 1.0% size/liquidity premium for a NOK ~7.6bn market cap with ~NOK 20m daily turnover: above the PwC/FFN median (0%) and about its average for market caps above NOK 5bn (WACC_INPUTS comment).*
A1	Growth above base rates	PASS	revenue CAGR 5.2% nominal, 2.4% real over 8 years
A11	Herding on consensus	PASS	estimates differ from consensus: +0.8%, +1.1%, +4.6%, -1.4%
A13	Target-price optimism	PASS	expected total return 35.5% vs Ke 9.8% (>Ke+15pp): reverse DCF shown, bear 31.1 below the price
A14	Skewed rating scale	PASS	BUY above Ke+5%, SELL below Ke-5% (expected total return vs cost of equity)
A16	Tax and regulatory regime	PASS	sector 'consumer': ordinary corporate tax 22.0%
A6	Terminal growth not paid for	PASS	g 2.0% ≤ rf 4.7%; reinvestment 8.0% of NOPAT = g/RONIC
A7	Terminal value dominance	PASS	TV 66% of EV
B17	Working capital	PASS	NWC -15.6% of revenue (3y avg) → low of -16.0% in the forecast
B18	Capex below depreciation while growing	PASS	capex ≥ D&A (owned assets) in every growth year
B20	Inconsistent leverage in WACC	PASS	relevering D/E 17.6% = D/V 15.0% / (1 − D/V): True; forecast D/V 16.3%
B22	Reporting vs listing currency	PASS	reports and lists in NOK
B23	IFRS 16 double count / omission	PASS	FCFF after lease payments (pre-IFRS 16); bridge deducts NIBD 1,065 ex leases; lease liabilities 4,961 shown as memo only; peers on a pre-IFRS 16 basis
B24	Incomplete EV-to-equity bridge	PASS	bridge: NIBD, minorities 0, associates 0, pensions/other filled
B25	Share count and dilution	PASS	basic 192.1m, diluted 193.2m
B26	Stale balance sheet / dates	PASS	balance sheet 30 Sep 2026, valuation 30 Oct 2026: 30 days
B27	Leverage, refinancing, dividends	PASS	peak NIBD/EBITDAaL 1.2x, min interest cover 14.2x
B28	Exit multiple vs Gordon TV	PASS	Gordon TV implies 8.3x EV/EBITDAaL vs the exit cross-check 9.0x (-8%)
B30	MAR / 2016/958 disclosures	PASS	all disclosure fields present
A15	Binary event not weighted	N/A	no binary event (META)
A8	Peak-cycle earnings capitalised	N/A	not cyclical (META)
A9	Commodity deck vs forward curve	N/A	no commodity exposure in META
